Pipet Tips & Serological Pipets

High Quality Filter Tips

The very latest micropore technology is used to ensure that all aerosols and liquids are prevented from entering the pipet. This technology eliminates the need for additives, found in self-sealing type filters (which also have the disadvantage of trapping samples in the tip once the filter has sealed). Genaxxon bioscience filter tips use virgin PE filters without additives (which would be a potential source of contamination), and their micropore technology ensures that the filters will never trap samples in the tip. Should the filter become wet due to inadvertent over-pipetting, it will act as a barrier to the passage of liquid, yet the sample in the tip may still be dispensed in the normal way, and can be re-used without fear of contamination.

Applications --- The Genaxxon bioscience Filter Tips are engineered for a wide variety of pipettors and are ideal for laboratories with multiple brands of pipettors - even multi-channel pipettors.

Specifications

Made from PP. Filter made from PE.

All Genaxxon bioscience filter tips are metal free and ideal for DNA amplification (PCR) and microbiological applications including the handling of radioactive, bio-hazardous and corrosive samples.

Racks & Boxes

Cryo Boxes with Grid

Cryo Box made from ultra-low temperature polypropylene for the storage of up to 81 cryovials or 1.5m/2.0ml microcentrifuge tubes. No acetate grid required as box has moulded grid reference (1-9 and A-I) for ease of sample location. Fixed dividers (approx. 13 mm square per division). Translucent colour lid and frosted writing panels. Ultrafreezable for storage down to -196°C , Fully autoclavable at $+121^{\circ}\text{C}$. Available in 5 neon colours, natural or black. External Dimensions: 130 x 130 mm square and 50 mm fixed height...
